Necessary Steps and Download link:

pip install -r requirements.txt

pip install selenium

pip install requests

https://chromedriver.chromium.org/downloads

https://git-scm.com/downloads

Given Task:

#Try to store all of these images in mongo db
#Try to implement it with class and object
#Coding standard
write a function for fetch all the image based on their name from database
Try to modify a code so that i will first search in database and check if images are available for a
#respective search if not then only scrap
